

Birmingham Airport

Overview:

AdeSmoke® – Protecting our Borders – AdeProtect®

Adexsi were pleased to help support HM Revenue & Customs with its new Inland Border Facility at Birmingham Airport. The Old Car Park 6 has been converted into a purpose built site.

The site will act as an office for processing transit movements of goods to and from the United Kingdom.

It provides parking for HGVs and other vehicles with increased security measures and facilities to enable the checking of vehicles and goods entering and exiting the site.

The HMRC's site has been built in rapid time under the requirements of a Special Development Order (SDO) issued by the Government.

VINCI Construction engaged BFL Engineering Services Ltd who employed Adexsi UK's expertise to help deliver this fast track project.

Outcome:

AdeSmoke® powered smoke extract systems were installed and Adeprotect® ongoing maintenance service is being provided.
