adeprotect®

Safe, compliant maintenance for smoke control systems

★ Covid19 - Key Worker Status
Supporting Government
with Essential Maintenance

As Europe's leading manufacturer of ventilation and environmental control systems, Adexsi is perfectly placed to offer scheduled maintenance and emergency call-out services for life-saving smoke control systems.

Why service smoke control equipment?

Any building owner or facilities manager has a personal responsibility to ensure their structure meets the necessary legislation in terms of fire and smoke management systems, with heavy fines already handed out in the UK to individuals who flaunt the law – these systems are designed to save lives and protect assets; to let their proper care lapse is a crime.

With AdeProtect® you can be assured of compliance with the Regulatory Reform Order (2005) Fire Safety – commonly known as the RRO – and avoid any punitive action implemented by the Fire Brigade and local councils.

Why choose AdeProtect®?

The nature of smoke control systems within buildings is often misunderstood, with many building managers more au fait with their fire alarm arrangement than their vents, extract fans and associated equipment.

That's where we come in, undertaking careful site audits as a standard part of our service offering, ensuring not only that core components are operational but that they are correctly interacting via the control systems (smoke control often relies on the combined effectiveness of multiple pieces of equipment, for example a smoke alarm activating an extraction fan and closing smoke dampers to prevent smoke spread throughout the building).

Clients

Adexsi Protect has access to the spare parts, new equipment and design and service engineers that ensure its maintenance service is second to none. As part of a major international specialist business group, we achieve products at manufacturer level, cutting out supplier costs. Above all, we bring a level of expertise that means you can have complete peace of mind.

The AdeProtect® approach

BS9999:2008 offers solid guidance on how often checks should be carried out on your equipment, and we use this to create our service schedules, prolonging the life of your equipment and offering practical, pragmatic solutions when systems reach the end of their serviceable lives.

Our offering:

- Scheduled maintenance
- 24hr call out
- Considerate working practises (to keep premises open)
- Access to market-leading replacement kit
- Spare parts
- Software updates
- Service reports, site audits and certification

Equipment we service:

- Controls
- Smoke curtains
- Smoke detectors
- Car park systems
- Extract fans
- Dampers
- AOVs

If your smoke control system is due maintenance, or if you're simply unsure of how the legislation applies to you, please give us a call on **08450 840 555** to book a preliminary site audit.

Adexsi UK Full Service Cycle

Design

- Integrated smoke extraction
- Invisible smoke extraction

Environment

- High thermal performance skylights
- Intelligent shading solutions
- Intelligent Natural Ventilation

Comfort

- Acoustic smoke extraction
- Zenithal lighting
- Natural ventilation

Security

- Natural smoke extraction
- Fire curtains
